Title

Short imperative summary

Description

Build an operations dashboard for the Atlas launch team. Show release readiness, service health, current blockers, and the critical path. Add a preview recipe so we can inspect the branch before accepting it.

Add files

Paste or drop files

Refined description

Build the Atlas launch operations dashboard in the isolated task branch.

Requirements:
1. Show launch readiness, active workstreams, blockers, and the deployment window.
2. Show service health and a readable critical-path checklist.
3. Compute status freshness from runtime data instead of hard-coded display text.
4. Add a valid .taskmonki/preview.yaml recipe with a primary HTTP route.

● Review

Needs changes

Review found one status-freshness path that becomes stale after launch.

Last reviewed20m ago

Reviewed diff0bd1c4df · fp 0bd1c4df

● 1 Major

● MAJOR

Status freshness is hard-coded

dashboard.mjs:18

The launch status says it was checked 14 seconds ago even after the underlying timestamp changes, so operators can mistake stale data for a current health signal.

Derive the relative age from the latest status timestamp and cover the boundary behavior in dashboard.test.mjs.
